keep design time at a minimum, your cost low and your website finished in just a few days. Love your new website or pay nothing. That's our preview before you buy guarantee.

What you need to know!

Domain Name

This is the address or number like a mail box for your website. Anyone can buy one. You'll need it to link to your new website so people can view it. One is usually included in the web hosting package for free for the first year. Otherwise they run typically about \$12 a year.

Hosting

After your website is made you need a place to store the files so that your website can be viewed worldwide. The package cost includes your domain price, web mail and the hosting itself. Hosting will cost around \$80 to \$100 a year. Your first year is usually at a discounted price.

Responsive Design

This design will show your website across all devices from computers to mobile devices in an equally user friendly way. You will have a legible and beautiful website that moves and reshapes itself according to the device that its viewed on.

Designing your site

If you like the look of someone else's website that is always a good starting point. Supply us the address and we'll check it out. We will do our best to make yours a similar style. It's a good idea to have colors in mind and photos of your company, employees or anything else you want on your site. If you don't have any photos, take some. Take lots of good quality photos, so we have a variety to choose from when designing. These will make your website stand out and give it a personal touch. Contact forms, event calendars, maps, music and youtube videos can all be good choices of media to make your site more informative. Musicians should supply a promo package, band shots, individual shots and group shots. If you plan on putting music on your site its best to link to an outside source to play your music to save bandwidth. But mp3's can be embedded with a player on your site for your guests to enjoy.
