SETTING UP GODADDY FTP WITH THE NEW CPANEL

By Floyd Jay Winters 02/06/2014

- 1. Log in to GoDaddy with your GoDaddy Account number and Password
- 2. Expand the Web Hosting option and click the green [Launch] button.

	Gi	ve feedback	
Filter: All Accounts		Search by domain	4
Accounts •	Ex	piration date

A. Once you have set up your FTP password, you can log in with FireFTP

B. When FireFTP is opened, click the dropdown in the upper left corner and choose [**Create an account...**]

S FireFTP		+	
Create an account	Connect	Edit	Abort
Create an account			
QuickConnect			-

C. Enter your <u>Host</u> (your domain name, such as johnsmith.com) and then enter your **FTP Login ID** and **FTP Login Password**.

Note: Your FTP ID and FTP Password may be different than the password you use to log on to your hosting company.

Main Detai	ils			
Account N	ame:	yourSiteName	Category:	•
Host:		yourDomainName	e.com	
Password:				
Password:	••••			Anonymous

D. Browse to your website location on your computer. It is a good idea to create a folder with your domain name in Documents/My Web Sites as shown below.

<u> C</u>	Documents/My Web Sites/yourDomainName ▼	<u>B</u> rowse

E. When you finish your setup, click [Connect] to connect to your remote site.

F. Double click on the remote **public_html** folder

If your directory is **/home/yourDomain/public_html** then **/public_html** is where you must upload my files and create your online **images** folder.

Later click **Edit** and Use the [**Connection**] tab to set the local folder on your drive that stores your Website.

Connectio	on Type

Initial Dire	ectories
<u>L</u> ocal:	Documents/My Web Sites/yourDomainName 🔸 Use Current
<u>R</u> emote:	public_html (leave blank on some servers)
	Keep directories in sync while navigating

If there was a file named **home.html in your folder,** I found that if I uploaded my index.htm, I had to **rename home.html to zhome.html** for index.htm to automatically launch.
